UC-454E+ HD Encoder

4*HD-SDI input 4-in-1 MPEG2/H.264 Encoder

SW Version: 1.01s

HW version: 4.4

Web NMS version: 1.00
About This Manual

Intended Audience

This user manual has been written to help users who will be installing, using, and integrating this product. Some of the chapters require prerequisite knowledge in electronics and broadcast technologies and standards.

Chapter 1 Introduction

1.1 Product Overview

UC-454E+ HD Encoder is our new professional HD audio & video encoding device with powerful functionality. It has been equipped with 4 HD-SDI channels input supporting MPEG-2 and MPEG-4 AVC/H.264 video encoding and MPEG-1 Audio layer 2, LC-AAC, HE-AAC and AC3 audio encoding. The 4 encoded SDI programs will output through ASI and IP ports in MPTS or SPTS. It adopts inner drawer-type structural design which greatly facilitates the change of encoding modules if needed. We apply dual power supplies with one for backup to provide a better protection for your business.

1.2 Key Features

- Dual power supply
- MPEG2 HD/SD & MPEG4 AVC/H.264 HD/SD video encoding
- MPEG1 Audio Layer 2, LC-AAC, HE-AAC and AC3 audio encoding
- 4*HD-SDI input
- Support VBR/CBR rate control mode
- Support CC (closed caption) EIA 608 & EIA 708
- Support Low Latency function
- Support PSI/SI editing and inserting
- Supports IP null packet filter
- ASI output, IP (MPTS & 4 SPTS) output over UDP, RTP
- LCD display, Remote control and firmware
- Web-based NMS management; Updates via web

1.5 Appearance and Description

**Front Panel Illustration**

- **LCD window**
- **Power supply indicators**
- **Power Alarm Switch**: When only one power supply is connected or one of the power supplies fails, the device will give alarm sound, and then press the alarm switch to turn off the alarm sound.
- **NMS port** for the connection between the device and PC
- **DATA port** for IP signal out
- **Indicators** for whole unit power supply, working alarm and input signal lock status
- **Control Buttons**
- **Handles**

**Rear Panel Illustration**

- **SDI Input Module 1**: Program input port 1&2
- **SDI Input Module 2**: Program input port 3&4
- **ASI output ports**
- **Power Supply Slot**
- **Power Switch**
- **Grounding**
Chapter 2 Installation Guide

This section explains the precautions users must follow to prevent injury to person or equipment. Please read all the details below before installation or use or this product.

2.1 General Precautions

✓ Must be operated and maintained free of dust or dirty.
✓ The cover should be securely fastened; do not open the products when power is on.
✓ After use, securely stow away all loose cables, external antenna, and others.

2.2 Power precautions

✓ When you connect the power source, make sure it does not cause an overload.
✓ Avoid operating on a wet floor and make sure the extension cable is in good condition.
✓ Make sure the power switch is on OFF before you begin installation.

2.3 Device’s Installation Flow Chart Illustrated as following

| Acquisition Check | Installing Device | Connecting Grounding Wire and Power Cord | Connecting Signal cable | Setting Parameter | Running Device |

2.4 Environment Requirement

<table>
<thead>
<tr>
<th>Item</th>
<th>Requirement</th>
</tr>
</thead>
<tbody>
<tr>
<td>Machine Hall Space</td>
<td>When user installs machine frame array in one machine hall, the distance between 2 rows of machine frames should be 1.2~1.5m and the distance against wall should be no less than 0.8m.</td>
</tr>
<tr>
<td>Machine Hall Floor</td>
<td>Electric Isolation, Dust Free Volume resistivity of ground anti-static material:</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Environment Temperature</th>
<th>5<del>40°C (sustainable), 0</del>45°C (short time), installing air-conditioning is recommended</th>
</tr>
</thead>
<tbody>
<tr>
<td>Relative Humidity</td>
<td>20%~80% sustainable, 10%~90% short time</td>
</tr>
<tr>
<td>Pressure</td>
<td>86~105KPa</td>
</tr>
<tr>
<td>Door &amp; Window</td>
<td>Installing rubber strip for sealing door-gaps and dual level glasses for window</td>
</tr>
<tr>
<td>Wall</td>
<td>It can be covered with wallpaper, or brightness less paint.</td>
</tr>
<tr>
<td>Fire Protection</td>
<td>Fire alarm system and extinguisher</td>
</tr>
<tr>
<td>Power</td>
<td>Requiring device power, air-conditioning power and lighting power are independent to each other. Device power requires AC 110V±10%, 50/60Hz or AC 220V±10%, 50/60Hz. Please carefully check before running.</td>
</tr>
</tbody>
</table>

2.5 Grounding Requirement

- Good grounding is the basis of reliability and stability for all devices and it is the most important guarantee against lightning arrest and interference rejection. The grounding conductor must adopt a copper conductor in order to reduce high frequency impedance and the grounding wire must be as thick and short as possible.

- Users need to make sure the two ends of the grounding wire are rust-proof and have good electric conductivity.

- It is prohibited to use any other device as a grounding circuit.

- The area of the conduction between the grounding wire and the device’s frame should be no less than 25 mm².
Chapter 3 Operation

3.1 LCD Menu Class Tree

- Initializing
  - General Working Status
    - 1 Status
      - 1.1 Alarm
      - 1.2 Uptime

      - 2.2.2 Program 2 (Same content with 2.1.1)
- 3 TS Config
  - 3.1 TSID
  - 3.2 ONID
  - 3.3 Output Bitrate
  - 3.4 NIT Insert
  - 3.5 ASI Output
- 4 Network
  - 4.1 NMS
    - 4.1.1 NMS IP
      - 4.1.2 Subnet mask
      - 4.1.3 Gateway
      - 4.1.4 MAC Address
      - 4.1.5 Web NMS Port
      - 4.1.6 Reset Password
    - 4.2 IP Stream
      - 4.2.1 MPTS Output (Same content with 4.2.1)
        - Data Enable
        - Null PKT Filter
        - Output IP
        - Output Port
        - Service IP
        - Subnet Mask
        - Gateway
        - Protocol
      - 4.2.2 SPTS A (Same content with 4.2.1)
      - 4.2.3 SPTS B (Same content with 4.2.1)
      - 4.2.4 SPTS C (Same content with 4.2.1)
      - 4.2.5 SPTS D (Same content with 4.2.1)
- 5 System
  - 5.1 Save Config
  - 5.2 Load Saved
  - 5.3 Factory Reset
  - 5.4 LCD time-out
  - 5.5 Version
3.2 Initial Status

Switch on the device and wait until this screen appears:

- **UC – 454E HD Encoder**: Module number and name
- **P1**: Program 1; **P2**: Program 2; **P3**: Program 3; **P4**: Program 4
- **X.XX Mbps**: indicate the current encoding bit rate of the corresponding channel.

3.3 General Settings for Main Menu

Press LOCK key on the front panel to enter the main menu. The LCD will display the following pages where user can configure the parameters for the device.

User can press UP/DOWN buttons to specify one item and then press ENTER to enter its submenus. Press MENU to step back to upper level menu.

1) **Status**

- **Alarm**
  
  The alarm indicator will turn on if there is no A/V signals inputting or outputting bit rate overflows. User then can enter this menu to check the error type.
➤ Uptime

Displays the working time duration of the device.

![Uptime](image)

2) Input Sets

Under this submenu, the LCD will show “2.1 Input 1” and “2.2 Input 2” to represent the two SDI-input modules respectively.

![Input Sets](image)

Each SDI input module supports two program input connectors. Under submenus 2.1 (or 2.2), the user can set the video/audio parameters for the 2 SDI programs respectively.
Video in Status

Users can enter this menu to check the video input status.

- **Video Format**

  The SDI encoding module supports both “MPEG2” and “H.264” video encoding formats. Users can enter this menu to select one format from the 2 options.

  ![MPEG2 H.264](image)

  Press ENTER to shift ‘*’ to ‘ ’, and then press UP/DOWN buttons to specify one item and then press ENTER to confirm. Press MENU to step back to upper level menu.

  *(The operation method is applicable for rest part.)*

- **Low Delay**

  This unit can achieve a low time delay from encoding to decoding terminal end-to-end.

  ![Normal Mode 1](image)

  ……………………………………………………………………………………………

  **NOTE**  …………………………………………………………………………………

  The different combinations of Video Format, Video Bit-rate, Low Delay Mode, Resolution of signal source, and Decoding solution adopted on terminal side will have an impact on the latency.

  ........................................................................................................

- **Video Bit Rate**

  Users can set the video encoding bit rate manually in this menu.

  0.5~19.5Mbps for H.264 encoding

  1~19.5Mbps for MPEG-2 encoding

  ![Video Bit Rate 14.000 Mbps](image)

- **CC Switch**
CC refers to Closed Caption.

Users can select a standard for the CC from the 2 options in this menu.

- **EIA 608**
  - **EIA 708**

- **Audio Format**

  The SDI encoding module supports 4 encoding formats. Users can enter this menu to select one format from the 4 options.

  - **MPEG1 Layer 2**
  - **MPEG2 AAC**
  - **MPEG4 AAC**
  - **AC3**

- **Audio Bit Rate**

  The audio bit rate ranges from 64Kbps to 320Kbps. Users can select one bit-rate from the options provided.

  - **Audio Bitrate**
    - **64Kbps**

- **Audio Gain**

  Users can adjust the audio gain in this menu.

  - **Audio Gain**
    - **100 %**

- **Program Info**

  Users can enable or disable the program output in the first sub-menu and configure the other parameters in the rest sub-menus.

  - **Program Output**
    - **Enable**
  
  - **Program Name**
    - **TV-101**
  
  - **Service Name**
    - **TV-Provider**
3) TS Config

This encoder supports TS output via ASI ports. ‘TS Config’ is for the configuration of ASI output. Its submenus contain:

- **TS ID/ON ID**
  
  Users can set the TS ID and Original Network ID in the 2 submenus. The IDs are in hexadecimal form.

- **Output Bit rate**
Users can set the max output bit rate for the ASI MPTS out. (Range 0-100 Mbps)

- **NIT Insert**
  Users can insert your NIT with operations in the menu.

- **ASI Output**
  Users can copy a stream from the IP out streams (1 MPTS & 8 SPTS) to output through ASI.

4) **Net Work**
‘Net work’ is divided into 2 parts: NMS and IP Stream.

- **NMS**
  Submenus under ‘NMS’ are for setting the parameters related to the device connection in the network.

  - **NMS IP**
    - 4.1.1 NMS IP
    - 4.1.2 Subnet Mask
    - 4.1.3 Gateway
    - 4.1.4 MAC Address
    - 4.1.5 Web NMS Port
    - 4.1.6 Reset Password

  - **The IP address for connecting the device to PC**

  - **Subnet Mask**
    - 255.255.255.000
IP Stream

Submenus under ‘IP Stream’ are for setting the output IP stream in MPTS or SPTS.

Gateway
192.168.000.001

MAC Address
201012345678

Web NMS Port
00080

Reset Password?
Yes ▶ NO

5) System

Users can set the system parameters in this menu. Enter ‘System’ submenus to
separately set corresponding parameters.

Choose yes to save settings and press ENTER to confirm

Choose yes to restore the device into the last saved configuration.

Choose yes to restore the device into factory’s default configuration.

Press DOWN/UP key to select a time out for the LCD lighting duration (5-120 seconds)

It displays the device name and software/hardware version information.
Chapter 4 WEB NMS Operation

User can use the front buttons to set configurations and control the configuration by computer when the device connected to web NMS Port. User should ensure that the computer’s IP address is different from the encoder’s IP address; otherwise, it would cause IP conflict.

4.1 login

The default IP address of this device is **192.168.0.136** but can be modified from the front panel. Connect the PC (Personal Computer) and the device with an Ethernet cable then use the ping command to confirm they are on the same network segment. I.G. the PC IP address is **192.168.99.252**, we then change the device IP to 192.168.99.xxx (xxx can be 1 to 254 except 252 to avoid IP conflict).

Use the web browser to connect the device with a PC by inputting the Encoder & Modulator’s IP address in the browser’s address bar and press Enter.

It will display the Login interface as Figure-1. Input the Username and Password (Both the default Username and Password are “admin”.) and then click “LOGIN” to start the device setting.

![Figure-1](image-url)
4.2 Operation

When we confirm the login, it displays the WELCOME interface as Figure-2.

User can click any item here to enter the corresponding interface to check information or set the parameters.

It automatically identifies and displays the signal source interface and real-time encoding bit rate of corresponding input channel.

Figure-2

Input 1

From the menu on left side of the webpage, click “Input 1” to display the information of the programs (1<sup>st</sup> & 2<sup>nd</sup> ones) from the 1<sup>st</sup> SDI encoding module as Figure-3.
The different combination of **Video Format**, **Video Bit-rate**, **Low Delay Mode**, **Resolution** of signal source, and **Decoding solution** adopted on terminal side will have an impact on the latency.

---

**NOTE**

For user to turn to refer detailed explanation of terms on this interface

Click this button to apply the default setting of Input 1

Click this button to apply the modified parameters.
Input 2

Similarly, from the menu on left side of the webpage click “Input 2” to display the information of the programs (3rd & 4th ones) from the 2nd SDI encoding module.

IP Output

Click “IP Output” to display the interface where to configure the output IP stream in MPTS or SPTS the as Figure-4.

After setting the parameters, click “Apply” to save the setting.

General

Clicking “General” from the menu will display the interface as Figure-5 where to set the network info for the output TS.
Save/Restore

From the menu on left side of the webpage click “Save/Restore” to display the screen (Figure-6) where to save or restore your configurations.

Restart the Device

By clicking “Reboot” from the left menu, the screen will display Figure-7 and by clicking the “Reboot” box, it will restart the device automatically.
Update the Device

Click “Firmware” from the menu to display the screen Figure-8. Here the user can update the device by using the update file.

Click “Browse” to find the path of the device update file for this device then click “Update” to update the device.

After updating the device, user needs to restart the device by using Reboot option.
When clicking “Network”, the display will show the screen Figure-9. It displays the network information of the device and user can change the device network configuration as needed.

![Figure-9](image_url)

**Change Password**

When user clicks “Password”, it will display the password screen Figure-10. Here the user can change the Username and Password for logins.

![Figure-10](image_url)

- Keyboard and LCD Lock: If it is marked with “✓”, the LCD and keyboard will be
locked to avoid unrelated users’ modifying or view the device information and configurations. User can’t operate the keyboard or LCD while the device IP address is shown in the LCD window.

**Backup/Load**

Click “Backup/Load” from the menu to display the screen Figure-11.

**Backup Configuration** – To back up the device configuration file to a folder

**Load Configuration** – If user needs to load the old configuration to the device, click “Browse” and find the backup configuration file path. After selecting the file, click “Load File” to load the backup file to the device.

![Backup/Load Screen](image-url)
Chapter 5 Troubleshooting

Our ISO9001 quality assurance system has been approved by the CQC organization. To guarantee products’ quality, reliability and stability, all our products have passed testing and inspection before leaving the factory. The testing and inspection scheme already covers all the Optical, Electronic and Mechanical criteria, which have been published by our company. To prevent a potential hazard, users must strictly follow the operation conditions.

Prevention Measure

- Install the device in temperatures between 0 to 45°C.
- Make sure device has good ventilation for the heat-sink on the rear panel and other heat-sink bores if necessary.
- Check the input AC in the power supply’s working range and make sure the connection is correct before switching device ON.
- Check the RF output level varies within the tolerant range.
- Check that all signal cables have been properly connected.
- Frequently switching device on/off is prohibited; the interval between every switching on/off must be greater than 10 seconds.

Conditions when user should unplug power cord

- Power cord or socket damaged.
- Any liquid flowed into device.
- Any stuff causes circuit short
- Device in damp environment
- Device was suffered from physical damage
- Longtime idle.
- After switching on and restoring to factory setting, device still cannot work properly.
- Maintenance needed
